Cardiometabolic disease in South Asians: What have we learned in the U.S.?

Alka M. Kanaya MD
Professor of Medicine, Epidemiology & Biostatistics, Division of General Internal Medicine, University of California, San Francisco (UCSF)

Dr. Kanaya is a general internist and epidemiologist who has focused her clinical research in the field of cardiovascular disease epidemiology, primarily in identifying behavioral, sociocultural and biologic risk factors for individuals at highest risk for type 2 diabetes and cardiovascular disease. She is professor of Medicine, Epidemiology & Biostatistics at the University of California, San Francisco. She is the Principal Investigator for the Mediators of Atherosclerosis in South Asians Living in America (MASALA) Study, an NIH-funded prospective cohort which aims to identify novel risk factors associated with cardiovascular disease and diabetes in South Asians compared to the four ethnic groups in the Multi-Ethnic Study of Atherosclerosis. She has also conducted two multi-center behavioral randomized controlled trials among adults with prediabetes to ameliorate metabolic risk factors among diverse ethnic minority groups. She has mentoring grant (K24) from the NHLBI and currently mentors several junior investigators working in the field of cardiovascular health disparities.
